

COMPLIANCE **PASS**

Our streamlined **SIX-STEP PROCESS** guarantees* swift compliance with pest control regulations. Here's how we ensure rapid adherence:

1. **ULV CRITICAL-AREA Flushing:** Targeted flushing of appliances, equipment, and furniture to dislodge pests.
2. **Comprehensive Aerosolization:** Treatment to the targeted areas of the establishment, covering up to 1200 sq ft, to effectively neutralize pests.
3. **Pesticide Dust Application:** Direct application of pesticide dust in key areas, including appliance compressors, electrical panels, and outlets, to prevent pest harborage.
4. **Broadcast Pesticide Treatment:** Distribution of our exclusive pesticide chemical blend across the premises.
5. **Food-Grade Pesticide Baits:** Deployment of safe, effective baits to ensure continued pest control.
6. **Follow-Up Service:** A critical reassessment to ensure the effectiveness of the initial treatment.

With detailed guidance for your staff and ongoing support over the next 90 days, we make the preparation for reinspection effortless. Trust in our comprehensive approach for a smooth path to compliance.

*Subject to additional terms, conditions, restrictions and limitations.

COMPLIANCE PASS, the industry's leading program designed to eradicate up to 95% of pest infestations and enhance your chances of passing regulatory audits on the first try!*

1

Dislodges pests from appliances, equipment, and furniture.

CRITICAL-AREA FLUSH

In the initial phase of our pest control strategy, we focus on dislodging cockroaches from their common hiding spots, including beneath appliances, within furniture, and inside the myriad crevices found throughout the premises.

The chemicals we utilize are specifically engineered to attack the nervous system of these pests, leading to inevitable mortality.

Once the cockroaches come into contact with these potent substances, they either absorb or ingest the pesticide, which promptly leads to their rapid extermination.

This targeted approach ensures that cockroaches are efficiently removed from their sanctuaries and dealt with swiftly, minimizing any chance of resurgence.

2

Direct targeted areas, up to 1200 sq ft., surgical neutralization of pests.

AEROSOLIZATION

Our fogging technique employs a sophisticated device that converts liquid pesticide into a fine aerosol.

This process generates a dense fog or mist, consisting of minuscule droplets, ensuring a thorough and uniform application.

As a result, the pesticide mist effectively permeates every corner of the treated area, providing comprehensive coverage and ensuring no pest is left untouched.

This method not only maximizes the efficiency of the pesticide but also enhances its reach, targeting even the most inaccessible spots where pests may hide.

3

Targets key areas like appliance compressors and electrical panels.

PESTICIDE DUST

Next, we strategically apply a specially formulated pesticide dust to key infestation points.

This advanced dust formulation is designed for a swift action, capable of eliminating pests through contact or ingestion within just a few minutes of exposure.

Additionally, its waterproof properties ensure that the effectiveness is not compromised in damp or humid conditions, making it ideal for a wide range of environments.

Impressively, this pesticide dust continues to protect against infestations with an enduring residual effect that lasts up to 8 months, providing long-term relief from pest problems.

Distribution of our exclusive pesticide chemical blend across the premises.

PESTICIDE CHEMICALS

Pyrethrum and **Pyrethrin**, extracted from Chrysanthemum flowers, provide an immediate and effective knock-down solution against German cockroaches.

Insect Growth Regulators (IGRs) complement this by targeting and disrupting pest development, ensuring control for up to 120 days.

Pyrethroids, as a synthetic alternative to Pyrethrin, offer greater residual impact.

Combining these elements, we've formulated a potent mix of **3.5 Oz per Gallon**, creating a comprehensive pest management strategy that ensures **QUICK ACTION, PROLONGED CONTROL, AND BROAD-SPECTRUM EFFICACY.**

5

Deployment of safe, effective baits to ensure continued pest control.

PESTICIDE BAIT

We conclude our pest control process with the meticulous placement of pesticide baits in carefully selected strategic areas.

These areas are chosen based on thorough inspection and analysis, targeting spots where pests are known to frequent or where their activity has been observed.

With precision and expertise, our technicians ensure that the bait is strategically positioned to intercept pests' movements and effectively lure them to their demise.

This final step serves as a proactive measure to address any lingering pest populations and to prevent future infestations, providing long-lasting protection for your environment.

6

A critical reassessment to ensure the effectiveness of the initial treatment.

FOLLOW-UP SERVICE

Following the initial treatment, we schedule a thorough follow-up service within 7 to 14 days.

This ensures adherence to the treatment plan and allows us to assess the effectiveness of the initial intervention.

During this follow-up, our technicians conduct a comprehensive inspection to verify compliance with treatment protocols and to address any residual pest activity.

By providing this follow-up service, we strive to guarantee optimal results and complete satisfaction with our pest control efforts.
